Professional Summary

Software developer with 2+ years of experience in autonomous vehicles and agriculture tech. Specialized in frontend engineering, with experience in backend development, mobile applications, and cloud-based computer vision pipelines. I lead end-to-end frontend development of a fleet management platform for autonomous vehicles (Next.js, React, TypeScript), built a Flutter app for live vehicle monitoring, and set up a computer vision data pipeline that takes raw vehicle images all the way to deployed models. I also contribute to backend and middleware architecture in FastAPI, review code, and mentor junior developers.

Work Experience

MultiplexEV Pvt Ltd. **Bengaluru, KA**
Software Developer II **April 2026 – Present**

- Lead end-to-end frontend development of an autonomous vehicle fleet platform (Next.js, React, TypeScript), delivering live tracking, route mapping, mission management, dispatch workflows, and a unified design system.

- Built a computer vision data pipeline end to end on GCP and CVAT: duplicate frames are filtered, images are model pre-labeled and reviewed, then fed into automated training and deployment.

- Contribute to backend and middleware architecture and develop FastAPI services with Swagger docs, JWT authentication, role-based access control (RBAC), and PostgreSQL queries.

- Write unit tests and work through SonarQube findings (bugs, code smells, vulnerabilities), monitor services in Grafana, and deliver work in Agile sprints on Jira.

- Mentor junior developers and review their pull requests, with a focus on readability, test coverage, and keeping coding standards consistent across the team.

- Built farm and site management workflows with analytics and reporting, giving teams a clearer view of farm and site operations and making day-to-day planning and decisions easier.

MultiplexEV Pvt Ltd. **Bengaluru, KA**
Software Developer I **December 2024 – March 2026**

- Designed and built an agriculture analytics platform (Next.js, TypeScript, FastAPI) that takes results from Gemini and DINO models and turns them into crop health and disease dashboards.

- Built and maintained a cross-platform Flutter and Dart app for real-time vehicle monitoring, showing live GPS location, battery charge (SoC), and charging status from backend APIs.

- Set up a Frappe-based pipeline to manage autonomous vehicle test records and the data generated from vehicle testing, automating report generation and dashboard updates.

- Built an internal dashboard for tracking and redeeming food coupons, and tested its APIs and backend workflows end to end in Postman to keep the app reliable.

- Reworked internal dashboards using React and Figma with Docker-based deployments, and improved the company website's SEO and content to make it easier to find.

MultiplexEV Pvt Ltd. **Bengaluru, KA**

Software Developer – Intern **June 2024 – November 2024**

- Wrote a Python package for analyzing vehicle data with a custom Frappe UI on top of it, and set up and configured ERPNext sites and applications for the team.

- Made the company website faster to load and smoother to use across devices by optimizing its performance, page loading speed, and overall user experience.

- Made pages work well on every screen size using Swiper.js and CSS Grid, so the layout and UI stayed consistent across phones, tablets, and desktop screens.

- Built interactive pages in HTML, CSS, and JavaScript, and automated Excel-based workflows and request handling with Google Apps Script to cut down on manual work.

Greet Labs Pvt Ltd. **Bengaluru, KA**

Full Stack Web Developer – Intern **June 2023 – December 2023**

- Built responsive UI screens for Tax-Track using modern frontend tools, working closely with the backend side as part of a full-stack development team.

- Integrated third-party APIs into the app, improved its overall performance and load times, and validated every workflow thoroughly in Postman to catch issues early.

Vovo Technologies **Davanagere, KA**

Data Analytics Intern **August 2022 – September 2022**

- Cleaned, transformed, and reshaped COVID-19 datasets in Python and Pandas so the data was accurate, well structured, and ready for analysis and reporting.

- Made charts in Matplotlib and Seaborn, and wrote automation scripts that kept the dashboard-based monitoring up to date with fresh data as it came in.

Education

B.E. (**Information Science and Engineering**) 2019 – 2023

GM Institute of Technology (Visvesvaraya Technological University) **CGPA: 8.01/10**

Skills

Programming: JavaScript, TypeScript, Python, Dart

Web Technologies: HTML, CSS, React.js, Next.js

Mobile Development: Flutter, Dart, Android

Backend & APIs: FastAPI, Node.js, REST APIs, Middleware, JWT, RBAC, Swagger, Postman

Databases: SQL, PostgreSQL, MySQL, MongoDB, ClickHouse

Cloud & DevOps: Google Cloud Platform (GCP), Docker, CI/CD Pipelines

Frameworks & ERP: Frappe Framework, ERPNext

Testing & Quality: Unit, Integration & E2E Testing (Playwright), SonarQube, Code Reviews

Tools & Monitoring: Git, GitHub, GitLab, Grafana, Figma

Process & Leadership: Agile (Scrum), Sprint & PI Planning, Jira, Mentoring

ML & Data: CVAT, Image Annotation, Integrating Gemini & DINO model outputs, NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn
